

# Water Conservation

By: Gavin Howells

# Why Is Water Conservation Important?

- The U.S. Wastes 7 billion gallons of drinking water a day.
- 10% of all people lack access to safe water.
- There are many countries that don't have much water, while we have quite the abundance of water here in the U.S.
- If you conserve water, you will cut your bill, allowing room to donate (If you're feeling generous).

# How Can You Conserve Water?

- Just by fixing a leak, you will waste 2,700 less gallons of water a year.
- Make sure to turn off water when you aren't using it (brushing your teeth, dishes, etc.)
- Take shorter showers.
- Don't use a toilet to dispose of trash only bodily wastes

# Thanks For Watching!

- Now, go ahead and conserve some water!
